

Chapter 7 – Risk Questions

<p>1.</p> <p>Write each expression with base 3.</p> 27^7	<p>2. Write the expression as a single power.</p> $\frac{\sqrt{27}}{\sqrt[4]{9}}$
<p>Risk:</p>	<p>Risk:</p>
<p>3. Solve:</p> $5^{3x-1} = 125^{2x}$	<p>4. Solve:</p> $2^x = 73$
<p>Risk:</p>	<p>Risk:</p>
<p>5. Solve</p> $3^{2x} + 3^x - 12 = 0.$	<p>6.</p> <p>To determine whether a person has a thyroid deficiency, a radioactive iodine with a half-life of 8.2 days is injected into the bloodstream. A healthy thyroid is able to absorb all of the radioactivity. The amount, R, of radioactivity present after t days can be modelled by the relationship $R(t) = R_0\left(\frac{1}{2}\right)^{\frac{t}{8.2}}$, where R_0 is the initial dose. How long will it take for 87.5% of the iodine to be absorbed into a healthy person's body?</p>
<p>Risk:</p>	<p>Risk:</p>
<p>7.</p> <p>Simplify, using the laws of logarithms.</p> <p>a) $\log 8 + \log 5$</p>	<p>8. Simplify, state any restrictions on variables.</p> $4 \log x - 5 \log \sqrt{x} + \frac{1}{2} \log x^8$
<p>Risk</p>	<p>Risk:</p>
<p>9. Simplify, state any restrictions on variables.</p> $\log(x^2 - 11x + 28) - \log(x - 7)$	<p>10. Solve:</p> $\log_4(x + 9) = 2$
<p>Risk</p>	<p>Risk</p>

<p>11. Solve</p> $\log_{11} x + \log_{11} (x + 1) = \log_{11} 6$	<p>12.</p> <p>Solve the equation $\frac{\log(28 - x^3)}{\log(4 - x)} = 7$.</p>																
<p>Risk</p>	<p>Risk</p>																
<p>13.</p> <p>The table below shows the population growth of rabbits living in a warren.</p> <table border="1" data-bbox="131 594 691 1005"> <thead> <tr> <th>Time (years)</th> <th>Number of Rabbits</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>12</td> </tr> <tr> <td>2</td> <td>15</td> </tr> <tr> <td>3</td> <td>19</td> </tr> <tr> <td>4</td> <td>23</td> </tr> <tr> <td>5</td> <td>29</td> </tr> <tr> <td>6</td> <td>37</td> </tr> <tr> <td>7</td> <td>46</td> </tr> </tbody> </table> <p>Use a model to predict when the population will reach 100.</p>	Time (years)	Number of Rabbits	1	12	2	15	3	19	4	23	5	29	6	37	7	46	<p>14. A wound, initially with an area of 80cm^2, heals according to the formula $A(t)=80(10^{-0.023t})$, where $A(t)$ is the area of the would after t days. In how many days will the wound be 75% healed?</p>
Time (years)	Number of Rabbits																
1	12																
2	15																
3	19																
4	23																
5	29																
6	37																
7	46																
<p>Risk:</p>	<p>Risk:</p>																
<p>14b. How fast is the wound healing on the 5th day?</p>																	
<p>Risk:</p>
